Basically, all the Amherst lab staff are more productive than everyone in Boston except Dookhan. In fact, if all the Bos staff were as productive as Amherst there would be no issue with backlog.

**Subject:** drug lab data

Each document has 2 tables:  
First is by case. 2<sup>nd</sup> table is by specimen.

First document is specimens rec'd in bos.  
Second document is specimens rec'd in amh.  
Different date ranges for the 2 sets.

Does Daniel Renkowski actually work here???

What further data do we want? This is fun.
